

January 1998

**TOPIC: DUAL DRIVE TRANSMISSION DRIVE PULLEYS**

### MODELS

**AFFECTED: ALL DUAL DRIVE WALK-BEHINDS**  
**DD MODELS** - serial no. 236 & up  
**DDS MODELS** - serial no. 101-1232

### PRODUCT IMPROVEMENT

#### Dual Drive transmission/engine pulley conversion (4" dia. to 4-3/4" dia. pulleys)

1998 model Dual Drives (DDS) starting with serial no. 1233 have a larger diameter transmission and engine pulley. The purpose for this change is extended belt life under severe use conditions. There have been several inquiries asking what is required to convert older Dual Drive models (DD thumb-control & DDS stick-control) to this new arrangement. The following list of materials will need to be ordered to make this conversion. Detailed instructions to perform the work are contained in the hardware packet (45190).

Part Number	Qty.	Description
45148	2	Transmission Input Pulley
45149	1	Crankshaft Pulley
22173	1	Transmission Drive Belt
45190	1	Dual Drive Pulley Hardware Packet
